Express Diagnostics International

Express Diagnostics International
1550 Industrial Dr.
Blue Earth, MN 56013

Express Diagnostics International Inc., based in Blue Earth, Minnesota manufactures and distributes drug and alcohol testing kits including DrugCheck, AlcoCheck and Health-Check. Founded in 2004, Express Diagnostics International has simplified drug testing, pain management testing, oral fluid testing and much more.

Express Diagnostics International recently consulted with BEVCOMM, their local telecommunication provider, to find a surveillance and monitoring solution to fit their rapidly growing needs. In four years, the company went from four employees to more than 90 and continues to expand.

Having no previous security system in place, they wanted a way to easily monitor employee performance and reduce theft within the facility. With multi-million dollar inventory and equipment, Express Diagnostics needed a security system to ensure these goods and their tools are safe and secure at all times.

After carefully determining their immediate security needs, BEVCOMM installed the exacqVision Enterprise video management system (VMS) running on a third-party server. The system utilizes a combination of Axis and Vivotek IP cameras.

The exacqVision VMS software is ideal as it requires minimal end-user training. All six company managers were able to easily start using the system without any time consuming technical support or training. They have access to live and recorded video using the free

Express Diagnostics has a 10 acre campus in Blue Earth, Minnesota with 2 facilities covering 33,000 square feet.

Express Diagnostics displays exacqVision VMS client on the monitor above their rackmount servers..

The exacqVision client is displayed on the monitor for the managers to see all areas of the facility at once.

exacqVision client software on their desktop computers throughout the facility.

Since several employees work weekend shifts, they place cameras at all entrances, exits, parking lots and main work areas to monitor in and outbound traffic.

In the past, Express Diagnostics experienced issues with theft. Now, with the exacqVision VMS software, managers can monitor and detect occurrences almost immediately and determine who was involved. If an incident is reported in the locker room, a manager can quickly search the recorded video to determine who is involved. Conveniently, stored video can be saved and exported to others within the company with just a simple click.

Equipment-At-a-Glance

Software:

- exacqVision Enterprise VMS software
- Exacq Mobile App

Hardware:

- Cisco 24 port POE switch
- Axis 214 PTZ network camera
- 16 Vivotek FD8135H IP cameras
- 2 Vivotek IP8372 IP cameras
- Third-party server PC

Purpose/Benefits:

- Reduced crime
- Protects company property
- Protects employees and personnel
- Increases productivity
- Saves time

Express Diagnostics has seen an increase in productivity of employees since installing the surveillance system. The CEO is able to go back and search the video for an exact date and time to verify that the employee completed their task correctly. He can easily see if the employees are accomplishing what's expected of them.

Additionally, exacqVision allows the CEO and managers to view video through the free Exacq Mobile app. Regardless of their location, they can pull up the Exacq mobile app on their phones or tablets to see all camera views. Managers have the ability to see all the entrances, exits, parking lots and main working area to see who is coming in and out of the facility.

Overall the exacqVision VMS solution has vastly improved the security and operations at Express Diagnostics, while providing an added level of comfort and security for employees.
